

Abstract of the Disclosure

A portable handheld work apparatus such as a sweeper, motorized cultivator or the like has a drive motor (3), a work tool, which is driven by the drive motor (3), and at least one transport wheel (13). The transport wheel (13) is fixed to the work apparatus via at least two struts (14, 15). A first strut (14) is rotatably mounted on the work apparatus at the end (19) of the strut facing away from the transport wheel (13) and a second strut (15) can be fixed with its end (20) to at least two attachment points (17, 18) on the work apparatus with the end (20) facing away from the transport wheel (13).
